

# RECONHECIMENTO FACIAL

Conhecendo a biblioteca de Reconhecimento  
Facial da Linguagem Python

# GIOVANA DE LUCCA

Bemol Digital
- **PyLadies Manaus**  
Voluntária e Organizadora
- **Pós-graduanda**  
Ciência dos Dados na UEA

# Reconhecimento Facial

Como funciona?

## LOCALIZAÇÃO DO ROSTO

Cálculos matemáticos e/ou técnicas de Deep Learning de alto custo computacional

## QUEM É A PESSOA DA FOTO

Cálculos matemáticos e/ou técnicas de Machine Learning de baixo custo computacional

# 01 PASSO

Coletar todos os dados com faces e  
organizá-los em pastas

# Sugestão de organização

## load\_image\_file

```
In: [ ] import face_recognition as fc
```

```
In: [ ] fc.load_image_file('pictures/fulano/foto1.png', mode='RGB')
```

**return np.array([...])**

# Fatores importantes

- A iluminação
- A resolução da imagem
- A distância da face para câmera
- A quantidade de imagens
- A rotação do rosto em relação à câmera
- Dentre outros...

# 02 PASSO

Procurar e recortar os rostos das  
imagens seleccionadas

## face\_locations

In: [ ] `import face_recognition as fc`

In: [ ] `fc.face_locations(img, number_of_times_to_upsample=1, model='hog')`

**`return (top, right, bottom, left)`**

# 03 PASSO

Codificar os rostos para otimizar o reconhecimento

## face\_encodings

```
In: [ ] import face_recognition as fc
```

```
In: [ ] fc.face_encodings(face_image, known_face_locations=None, num_jitters=1, model='small')
```

```
return [ [...], [...] ]
```

128  
CARACTERÍSTICAS

Atributos preditores					Atributo alvo
1.34	-8.67	...	0.86	9.56	Fulano
-3.89	2.89	...	2.15	-9.14	Ciclano
7.24	0.15	...	5.64	2.36	Beltrano
-9.56	-3.47	...	-6.21	1.35	João
2.67	-3.67	...	2.46	-8.32	Giovana
0	1	...	126	127	

# 04 PASSO

Fazer os cálculos ou treinamentos  
para reconhecer uma pessoa

## face\_distance

```
In: [ ] import face_recognition as fc
```

```
In: [ ] fc.face_distance(face_encodings, face_to_compare)
```

```
return np.array([ 0.63, 0.59, ... , 0.78])
```

**face\_encodings**

**face\_to\_compare**

**face\_encodings**

**face\_to\_compare**

**0.63**

**face\_encodings**

**face\_to\_compare**

**0.63**

**0.59**

**face\_encodings**

**face\_to\_compare**

**0.63**

**0.59**

0.78

face\_encodings

face\_to\_compare

0.63

0.59

0.78

# 05 PASSO

Considerando uma nova imagem,  
reconhecer uma pessoa pelo rosto

## compare\_faces

```
In: [ ] import face_recognition as fc
```

```
In: [ ] fc.compare_faces(known_face_encodings, face_encoding_to_check, tolerance=0.6)
```

```
return [ True, False, ... , True ]
```

**known\_face\_encodings**

**face\_encoding\_to\_check**

**known\_face\_encodings**

**face\_encoding\_to\_check**

**True**

**known\_face\_encodings**

**face\_encoding\_to\_check**

**True**

**False**

known\_face\_encodings

face\_encoding\_to\_check

True

False

known\_face\_encodings

face\_encoding\_to\_check

True

False

True

**known\_face\_encodings**

**face\_encoding\_to\_check**

**True**

**False**

**True**

Usar um limiar (threshold) para classificar uma pessoa como “desconhecida”

# OUTROS MÉTODOS

Funcionamento dos dois outros  
métodos da biblioteca  
face\_recognition

## face\_landmarks

```
In: [ ] import face_recognition as fc
```

```
In: [ ] fc.face_landmarks(face_image, face_locations=None, model='large')
```

```
return dict { 'mouth': [ (100, 745), ... , (243, 537) ], ... }
```

**large**

**small**

## batch\_face\_locations

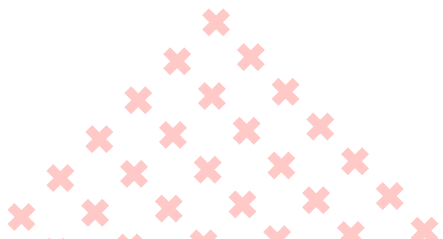

In: [ ] `import face_recognition as fc`

In: [ ] `fc.batch_face_locations(images, number_of_times_to_upsample=1, batch_size=128)`

**`return (top, right, bottom, left)`**
